# PARASULI FW 25

The PARASULI FW 25 collection tells the designer's research project with greater awareness. PARASULI is an upcycling project of outerwear recycled from discarded beach umbrellas that focuses on the reuse of local Sicilian umbrellas, recovered and transformed through tailoring techniques under the name of CANICATTIVA. It is the result of research into archival fabrics recovered from the old family craft business, discarded umbrellas, and even fabrics recovered from furniture stock that still bear their serial numbers. It is time to experiment with outerwear, which continues to be the spokesperson for experiences of recycling beach umbrellas "found" at the end of the summer. PARASULI FW 25 is a nostalgic collection narrated through photos of various objects, a mix of summer and winter elements. There is certainly no lack of interweaving with virgin wool, a reference to knitting. The PARASULI are padded: the umbrellas will have a snug fit and will transform into quilted outerwear covered with scraps from the same process. The initial question is: what lies behind the tailoring of a unique piece? It is time to show what lies behind the creation of a unique and custom-made piece. In this collection, the umbrellas will lend themselves to the design of maxi skirts and bustiers, as well as sporty outfits. Finally, the look will also be completed with vests and bombers. The collection proposed is ready for climate changes, with accessories like detachable hoods, virgin wool balaclavas, knitted twin sets, and maxi padded coats. They are designed not to belong to any gender category.
